Passionate software developer with a strong focus on backend development and solid experience with C#, .NET, and Unity.

I have worked with both **business-critical systems and technically complex solutions** within **health technology, simulation, Digital Twins, and full-stack development**. Through internships and academic projects, I have gained experience across the entire development lifecycle - from **requirements analysis and architecture to implementation and maintenance**. I thrive in **cross-functional environments** and possess strong skills in **technical communication and collaboration** with both developers and business stakeholders.

SKILLS

C# | Golang | Java | HTML | CSS | JavaScript | PHP | Typescript | React.js | Vue.js | Stripe | SQL | .NET | Unity

PROFESSIONAL EXPERIENCE

JBT Marel - Støvring, Denmark - *Software developer (Intern & Student assistant)*

February 1st 2025 - June 30th 2026

- Developed an **internal ordering system** to modernize and streamline workflows in the development department
- Developed and supported a **Unity-based simulation and Digital Twin** used in the development of a new machine
- Implemented **integration between Unity simulation and Beckhoff PLC systems**
- Participated in **concept development and technical decision-making processes**
- Responsible for aspects of **software architecture and stakeholder coordination**

Rune Madsen Irgend, Rune.Madsen@marel.com, **+(45) 23 62 91 50**

Black Capital Technology - Aalborg, Denmark - *Backend Developer (Intern)*

July 1st 2024 - July 31st 2024

- Developed and maintained **backend services** for the project *Heads*
- Implemented and integrated **Stripe payment gateway**
- Designed and implemented a **recommendation system** for specialists and treatments
- Developed a **notification system** to increase user engagement
- Troubleshoot and stabilized backend solutions

Reference: **Malthe Reipurth**, mr@blackcapitaltechnology.com, **+ (45) 52 25 50 55**

NordicScreen - Randers, Denmark – Full Stack Developer (Intern)

August 2023 - October 2023

- Full-stack development using **JavaScript, TypeScript, React, and PHP**
- Developed an application for **Samsung TV based on Tizen 6.5**
- Worked on both **frontend and backend tasks in a production environment**
- Gained experience with **commercial solutions and client-specific requirements**

JP|Politiken - Aarhus, Denmark

October 2023 - January 2024

- Developed a **Proof of Concept for an internal Consent Management Platform (CMP)**
- Implemented **cross-domain cookie scanning and identification**
- Stored data in a **relational SQL database**
- Built an **administrative dashboard and cookie consent popup**
Backend developed in **C#** and frontend in **React with TypeScript**
- The project provided JP|Politiken with insight into the **business value of an internal CMP solution**

Xtellio - Aalborg, Denmark

February 2023 - May 2023

- Developed a **dashboard for visualizing IoT data**
- Selected and visualized relevant KPIs in close collaboration with the company
- Frontend implemented using **Vue.js**
- Data retrieved and transformed via **JavaScript API from Xtellio's backend**

EDUCATION

Dania Games, Grenaa – Bachelor of Software Development (Professional Bachelor's Degree)

February 2025 - June 2026

- Augmented Reality
- Computer Graphics
- Machine Learning (Reinforcement Learning)
- Databases for Developers
- Software Quality
- System Integration and Development of Large Systems

UCN, Aalborg – AP Degree in Computer Science (Datamatiker)

September 2021 - January 2024

Final exam project in collaboration with **JP|Politiken**

Grade: **12 (highest grade)**

Developed a **high business-value Proof of Concept**.

Selected projects:

- **Booking system for an internet café**
(C#, .NET, SQL, WinForms)
- **Gift recommendation system for Kop & Kande**
(Java, SQL, Eclipse WindowBuilder)

OTHER EXPERIENCE / SIDE PROJECTS

Game Development / Unity (C#)

<https://jkjeldsteen.itch.io>

<https://jkjeldsteen.com/devlogs>

In my spare time, I develop games in **Unity (both 2D and 3D)** using **C#**.

I value Unity as a development platform because it provides powerful libraries that enable rapid implementation of functionality without having to build everything from scratch. This allows me to focus on **game architecture, system design, and how different components interact**.

I enjoy game development because it allows me to see my code **come to life as visual and interactive experiences on screen**.
